Depth of capture: surface Depth of water: 10'

Collected by D. Dockins

Tide: Date: 23 April, 1962

Method of capture: Dipped from Sargassum

Orig. preserv.: 10% Form. Time: 13:30 PST

A few larval shrimp.

Richard H. Rosenblatt

Following description taken next day by Earl L. Stubbs:

53. Sebastodes sp. yg. apparently suiensis

Color very much like that of the Sargassum largely, light bushy olive with lighter markings of bluish gray, almost white. Burnished silver over abdomen with some gilt sheen. Light areas on under side of head rather bright gilt. Ds deep brown becoming black submarginally with a clear border narrow on D_1 and broad on D_2! 2 very prominent colorless areas on D. one behind 3rd spine and the other at junction of fins. Opercles silvery blue and heavily speckled with blackish. (over)
