Depth of water:

Method of capture:

75' x 5-1 bag seine 1/4" mesh

Collected by:

C.H. + L.C. Hubbs, E.M. Rampa and  
R.R. Starry, Jr.

Date: VII:18:1945

Orig. preserv.:

10% form + borax

Time: 10-11:15 P.M.

All saved for specimens or for Strickhart Aquarium  
all

8. Engraulis mordax mordax: 2 post larvae 35-37 mm. <sup>disintegrated - Disc.</sup>

Engraulis  
to Jack Mearns  
12 mm. spec.  
at SDO

plus remains of probably 3 others of similar  
size, from stomach of Strongylura Tylosurus

(Also an unrecognized 12 mm. post larva.)

Also a 72 mm. yearling Engraulis from  
"jar" stomach.

To CAS. 1965

23.

Cololabis parva: 3 ad. 139-163 mm. from

stomach of Strongylura Tylosurus

~~Tylosurus~~

Strongylura cordii: 1 yg preserved,  
1 yg. - ad.

To Becker  
II:8:1946

preserved; eaten (

); 2 used for analysis of green  
pigment by Fox. For food see other spec.

S70 40 { *Atherinops affinis* ~~ad~~ P? : 3 ad. (disc.)  
*Batherinops* *californiensis* : 4 yg (36-40)  
 42 { *Aseuresthes tenuis* : 4 yg (28.5-42.5)  
 Tails of 2 yearling atherines in  
 stomach of *Strongylura*.

42. *Trachurus symmetricus* : 7 large ygs.  
 CNHM. to hl. sp. 53-85 mm.

46 *Umbria* *runder* : saved & alive.  
 VIII: 22: One preserved with parasite  
 on tail

S70 *Aseriphus politus* : 12 (17-24) larval, 1 ad. to CNHM 42563  
 47 *micrometrus minimus* : 1 ad. CNHM. 42562  
 55. *Leptocottus armatus australis* : 3 ad.  
 CNHM. 42561 Counts taken

47. *Hyperprosopon argenteum* : 1 ad,  
 CNHM. 42560  
*Amphistichus argenteus* : 6  
 42559
