Depth of capture: surface Depth of water: deep

Collected by

Tide: Date: 11.3.1950

Method of capture:

Orig. preserv.: observation Time: afternoon

5 Carcharias sp. (?) on very slender
shank, with narrow head, sharp nose,
barely visible 2nd dorsal, the dorsal of
moderate length, & grey color, seen at
surface when boat took off and down
very agile, when flapped by boat waves.
Perhaps E. velox (or a similar sp.) - about
midway down coast.

40(?) School of "melt" like fish seen at
surface by limbang
2 Atherinops affinis 5 (discard)

34 Sphaeroides sp. on jigger
seen from crevasse, about 4" long,
with heavy set forward, with no
prominent streak of light but
faintly with dark dots, seen
legally down when approached.

Perhaps S. melanostictus
