Collected by John Furuya

tuna clipper "Southland"

Tide:

Date: II: about 5: 1951

Method of capture: bait-net

Orig. preserv.: deep-frozen

Time:

III: 7: 1951

Specimens brought in personally by Mr. Furuya on day of landing. (He has brought in other fish, including Ogcocephalus.)

Condition of larger fish good, of small ones rather shrunken & frayed. Furuya has not found it convenient to use formalin given him. Kept in water about 10 hrs. then into 10% form.

All fish were in a cigar box without labels. Furuya called off localities, of most without hesitation, but slight doubt will remain. He said something about going S. to Ecuador. Loc. for little best? (dubious)
