

State & Country: Baja California Norte, México Field No. 401-403

County: Map: 1

Locality: Punta Baja (SW of Rosario)

Lat. N., Long. W.

Water: salt

Vegetation:

Bottom:

Cover: Temp.:

Shore: Current:

Dist. offshore: along & near Stream width:

Depth of capture: Depth of water: 0-30 feet

Collected by A.A. Allanson & party

Tide: Date: XI:27-28:1951

Method of capture: derris poisoning + hook-and-line

Orig. preserv.: 10% formal + borax Time:

XII:4:1953

Collecting was done at my request during a "temperature run" on which Valentine was introduced to region for his study of the Pleistocene terraces. I missed the trip due to internal hemorrhage. Object was to check faunal differences on the two sides of the point (with marked temperature differential), but colder (E) side wasn't fished and high waves interfered with collecting on W side (see notes for 401 and 403). The work needs to be repeated.
