

State or Country: Baja California Norte Field No. H 53-105
County: Map: H.O. 1149, 1943
Locality: off mouth (lagoon) of Rio San Felipe
Remains found on cobble ramp of fish no doubt
caught closely by Lat. ab. 30° 56' N., Long. 116° 16' W.
Water:
Vegetation: probably near Macrocytis

Bottom:
Cover:
Shore:
Dist. offshore:
Depth of capture:
Collected by Mexican fishermen (remains seen by C.H.D.)
Tide:
Method of capture:
Orig. preserv.: dry + formalin Time:

JUN 29 1953

Fish had obviously been taken close to shore by fishermen using skiffs, but exact location is unknown.

5. Heterodontus francisci (Richard): 1 ad ♂

preserved in 10% formalin
Fin spines. Head bone removed.
Saved for species record.
Condition otherwise good.

Triakis semifasciata (Richard): several
adults. Middle 3/4 of vertebral
column saved for Calif. Acad. Sci.
Specimens obviously caught day before.

6. Rhinobatos productus (Fyres): 1 large ad.

very - caught earlier

35. Stereolepis gigas (Fyres) - (Carl L.) Hubbs.

Remains of animal
with gill regions and
quite rather fresh; obviously
saved for lobster bait.

Identified by cross,
heavy gillrakers, 37,
with many feet plates.
