

State or Country: Baja California Field No. S1055-42
County: _____ Map: H.O. 1681, 1942
Locality: Guadalupe Id., on E shore
Lat. 29°07'00" N., Long. 118°18'30" W.
Water: _____
Vegetation: _____

Bottom: _____
Cover: _____ Temp.: _____
Shore: _____ Current: _____
Dist. offshore: _____ Stream width: _____
Depth of capture: _____ Depth of water: _____
Collected by Carl L. Hubbs, Sergio E. Lindsay, & party
Tide: _____ Date: V.I.P.O.: 1955
Method of capture: found along beach
Orig. preserv.: dry Time: _____

Found beside ruins of Russian fur
sealing houses at about 25 ft.
elevation, where presumably dragged
by feral cat or dog. Found because
it had never taken Sebastodes
on the island.

It is possible that the rockfish drifted
in from the mainland (seems unlikely)
or that it was thrown off a boat,
or was discarded lobster bait.

53. Sebastodes sp. 1 carcass.

Carl L. Hubbs

JUL 14 1955
Skeleton (with some flesh) worked over by
A.O. Flechaig, who feels all species other
than constellatus, rhomboid and so
can be eliminated. Shape of head, character
of spine, and narrowness of interorbital
barrier definitely point to S. constellatus,
and specimen is so labeled, with a?

Carl L. Hubbs
