8A Microrictus taaningi Parr?

1 (116)  
~~2 Ad (105-116)~~

Counts: 211:19:57. Ident.: Parr, 1947; Parr, 1951.

Two specimens identical with Parr's figure (1947) except jaw are normal (max. ext. to dentary). Counts agree except G.R. 2 higher. Parr's specimen probably damaged in capture as that dentary was forced external to max - this can be easily done in preserved specimens. RWE.
