Collected by Paul Saunders from Lobster fisherman
Tide: Date: 12 & 13 Dec. 1956
Method of capture: Lobster trap
Orig. preserv.: 10% formalin Time:

55 Scorpaenichthys marmoratus 2:288-349 mm SL

Both specimens are (after freezing) quite red ventrally; the larger somewhat paler, though neither are the bright garnet-like red sometimes seen in newly caught material. Dorsally the color is much darker, verging on a rich brown.

As flecking
