

State or Country: Off Central America Field No. S10 57-75

County: Map: 1

Locality: approximately off line between Guatemala and El Salvador

Lat. N., Long. W.

Water:

Vegetation:

Bottom:

Cover: about a log, about 2 x 6 ft. Temp.: about 83° F. (surface)

Shore: Current:

Dist. offshore: at least 100 miles Stream width:

Depth of capture: near surface Depth of water: deep

Collected by: Richard Tomlinson on tuna clipper "Southern Pacific"

Tide: Date: abt. IV:1:1957

Method of capture: bait-net

Orig. preserv.: frozen then 109° Time: day

buffered form.

First written IV:29:1957

Re-written MAY 14 1957

Specimens were brought by George T. Wernham of La Jolla, who got the

specimens for casting and gave me

chronous data for memory (indicating

fish caught off Todos Santos (Guam),

Saga California). I reported on the

collection IV:30:1957 in letters to Wernham

(copied to Fiebert and Walker), with wrong

date. A few days later I got the

data, as given above, from Mr. Tomlinson.

Wernham also confused the two lots,

wrongly including the Synbranch and

the Pleurogrammus in this lot

and wrongly assigning the Kyphosus

to the next lot. Richard Tomlinson lives at home

227 Eads Ave, La Jolla with father, Steele Tomlinson (64-1473)

The bait was observed under the

log and since bait was badly needed,

a haul was made. About 200 scoops

of "bobos" were obtained. These Tomlinson

says are occasionally taken at the surface

far from land and make very good

bait all are small.

More specimens were obtained of

the various miscellaneous fish caught,

(over)

but they somehow disappeared aboard ship.

34. Canthidermis maculatus (Bloch): 1 ad.,
228 mm. S.L. (fresh). Counts taken.
Checks nicely with Bleeker's
colored plate as copied by
J. L. B. Smith. At least 8 or 10
Triggerfish like this were netted.
40. Polydactylus
none preserved; about 200 scoops
obtained. Touloum gives length
as $1\frac{1}{2}$ - 2". ~~Counts taken.~~
42. Coryphaena equisetis Linnaeus: 1 hl. gr.
180 mm. (fresh). Counts taken.
51. Kyphosus elegans (Peters): 1 hl. gr.
108 mm. S.L. (fresh). Identified by
Mr. Mack & Hildebrand, Fishes of Panama.
Counts taken.

Gail L. Hubbs.
