

State or Country: California Field No. SIO-60-179

County: Los Angeles Map: 1

Locality: Santa Monica Bay, 7 1/4 mi. W. of Hyperion

[Lat. 33° 56.0' N., Long. 118° 34.5' W.]

Water: distance

Vegetation: [n.B. Depth & position do not give will]

Bottom:

Cover: Temp:

Shore: Current:

Dist. offshore: 7 1/4 mi. Stream width:

Depth of capture: bottom Depth of water: 420 feet

Collected by J.L. Baxter, Calif. Dept. Fish & Game

Tide: On boat Prowler Date: V.I. 19:1960

Method of capture: otter trawl

Orig. preserv.: form. Time:

VIII:11:1960

Orig. Coll. No. L460-326

Specimen received some days ago from John E. Fitch with an adult ♂ of Lycodopsis pacifica, with an indication that he thought the two were of the same species though he thought this one ran down to Eubryx cratellus, using Reef Boring key.

The 2 are indeed conspecific, but both are Lycodopsis pacifica. This one is a subadult ♀ 162 mm in S.L. (in form).

614) Lycodopsis pacifica (Collette): 1 ad. (subadult) ♀ 162 mm. S.L.

Sarel L. Hubbs.
