

State or Country: Field No. 91060-264
County: Map: 1
Locality: Tethys expedition, leg II, at core sta. 43
44
Lat. 8°14'-0 N, Long. 157°51'-0 W.
7°53'-0
Water:
Vegetation:

Bottom:
Cover: Temp.: 27.5°C
Shore: Current:
Dist. offshore: Stream width:
Depth of capture: at surface Depth of water: 2600 fms.
Collected by Tethys scientific party -26 July
Tide: Date: 25 July 1960
Method of capture: night-light & dip-nets
Orig. preserv.: 10% form. Time: 2030; 2300-0020

School of 8-10 spiny-puffers passed
by at core sta. 44.
Also, sighted large fish (about 3-4' long)
thought by one of the crew members to be
a snake-mackerel (its that long, skinny fish)

25A *Myctophum aurolaternatum* 1(80)
25B *Myctophum* ~~*spinosum*~~ ^{*lychnobium*} 4(54-66) [REDACTED]
25C *Centrobranchus nigroocellatus* 1(30)
chaerocephalus
23A *Euleptorhamphus viridis* 1(155)
25 *Myctophum nitidulum* 7(28-46)
34 *Diodon cydonxii* 3(33-161)
42 *Coryphaena equiselis* 2(72-80)
25 *Symbolophorus evermanni* 23(53-77)
25 *Symbolophorus reversus* 1(64)
(over)
