

State & Country: Baja California N., Mexico Field No. ^{General Series} 510 60-444-453
County: Map: 1.
Locality: Bahía San Quintín, in east arm of inner bay.
Lat. N, Long. W.
Water: salt
Vegetation:

Bottom: Sand and mud
Cover: Temp.:
Shore: Current:
Dist. offshore: Stream width:
Depth of capture: presumably bottom Depth of water: to 25 ft.
Collected by Beaudette Foundation, from SIO fish collection
Fishes (station not recorded). Date: XI:5-11:1960
Method of capture: from stomachs of fish traveled or seined
Orig. preserv.: food in alcohol Time:

XI:10:1961

Label in pencil ~~scribble~~ reads:

SQ P [= San Quintín Píscas]
Parach-Cal [= Parachanna californicus]

192 mm.
FOOD SAMPLES (from stomachs).

59(A). Quistula y. cauda (Jenkins & Evermann)

3 l.g. - ad.

1 l.g., 22 mm. S.L., with fins, a bit
of coloration, ~~shoulder~~ shoulder-
girdle flaps, etc., diagnostic;

1 of approximately same size represented
by tail end and largely distorted
skull, with jaw bones and
otoliths like first specimen;

1 nearly twice as large, with 1
otolith, ~~and~~ and jaw bones,
similar, represented by
skull (without median ridge)

Remains.
Otoliths only saved.

tail b. skulls.

-OVER-

2nd lot, same data (or lack thereof):

"*Paralichthys cal.* 165 mm"

67A) *Quietula y-canda* (Jenkins & Evermann): 4 hl. gr.-ad.,
25-35 mm. Some color in all; largest rather
well preserved; ^{fish} not saved; ^{white} ~~white~~ ^{same} ~~same~~

"SQ P #8

◇ Turbot [= *Hypsoopsetta guttulata*]
425 mm"

46A) *Scorpaenopsis politus* Ayres: various minute fragments
of a queenfish estimated to have been about 30 mm. in S.L.
Diagnostic are very flat opuscle & pectoral fin; very flat
preopercle with weak serrae around & below angle;
cycloid scales on preopercle & opercle; pair of stolidichthys
compared with some extracted from other specimens
(being sent to John E. Fitch for check); first 2 rays of D2,
with spine very short & ^{thinner} thinner than base of first 2
soft-rays.

? - Scales of young & some other young-reared (with
with stolidichthys in the marginal row.

"SQ P #9

◇ Turbot [= *Hypsoopsetta guttulata*]
440 mm"

40A) *Atherinops affinis*: *littoralis* ^{magdalenae} ~~littoralis~~

Fragment of hypural region recognizable from
dark underlying band and from form of
scales & hypurals. Length probably
about 30 mm. Discarded.

Bill L. Herbes.
