

SIO 73-228

State of Country: ^{Sur} Baja California, Mexico Field No. MV 73-I-1
 County: ^A Map: NO 21125, XI:29, 1971
 Locality: La Paz, at end of pier

Lat. $24^{\circ} 11' 46''$ N., Long. $110^{\circ} 18' 07''$ W.

Water: clear, salt

Vegetation:

Bottom: flat

Cover: near pier

Surf temp: 22.5°C bucket 0800 11:29

Shore: sand, boulders, etc.

Current:

Dist. offshore: .05 mile

Stream width:

Depth of capture: surface & below

Depth of water:

16-17 feet

Collected by MV 73-I party off SIO R/V Alexander Agassiz

Tide: on cruise CalCOFI 7303-G

Date: III:28:1973

Method of capture: hook & line & dipnet

Orig. preserv.: 10% buffered form. Time: day & night

Fish taken for collection of parasites, by L. Michael Moser and Mary Hanson Pritchard assisted by Richard S. Lee, who is taking gills and hearts

Fish individually labeled (MV 73-I-1) 1, 2, 3 etc. for identifications to be sent to those concerned.

(MV 73-I-1) 1 * Caranx ad., dipnetted while swimming at surface - used by parasitologists & Lee -

2 to 5 Haemulids - hook & line

~~disc~~ 6 Lutjanus ^{argenteiventris} sp. large young, hook & line

7 + 8 Hemirhamphids, ad. dipnetted by day

IV:3:73 L. Michael Moser ^{has} ~~wishes~~ to examine brain to find reason for abnormal behavior, if possible. Possibly related to heavy parasitization found.

* Caranx hippos disc 20 July 73

44 Haemulon steindachneri

4 (160-174)

disc 38 Lutjanus argenteiventris

1 (165)

MV 73-I-1A

Same data, except III:29 ca 0030

dipnetted with lined dipnet just made up.

netted by Carl L. Hubbs:

Mugil, presumably M. cephalus, previously seen from a cluster of earlier Sail L. Hubbs
