Low

Depth of capture:

Depth of water:

Collected by ED BROTHERS

Time: 8:00 A.M.

Method of capture:

Orig. preserv.: formalin

Date: 10 April '74

Predicted grunion run was midnight to 2 A.M. that morning - The fish were dead, however some sperm and eggs were viable since fertilization occurred when the fish were stripped and the gametes mixed.

The area on the beach where they were found is the broadest and flattest section along that part of the shore. No fish were seen where the beach width was reduced and the slope steeper.

40 *Leuresthes tenuis* 18 (132-170)
